

Proof-gap checklist

Technical founders & small agencies · ~10-minute self-audit: can your stack show what agents did?

PROOF = receipted action — durable record an agent acted on your system (identity · time · target).

How: Mark Y / P / N. Score = No + Partial. Fix the one gap that would embarrass you this week.

1) Ownership & domain

1.1 Agents on your domain/infra (exportable) · 1.2 Named key holders (Stripe/DNS/GitHub/DB) · 1.3 Exit without losing workflow+receipts · 1.4 AI not locked to one chat UI

Red flag: Agency Cursor did it; nothing on client accounts.

2) Tools / critical path

2.1 Booking·invoices·agents share truth · 2.2 You know what owns the critical path · 2.3 Failures surface to humans · 2.4 Not one undocumented Zap from mystery booking

Red flag: Zap owns revenue; agents are a demo.

3) Receipted actions (PROOF)

3.1 Durable write on act (not only chat) · 3.2 Non-engineer, one link · 3.3 Identity+time+target · 3.4 Show client without IDE share · 3.5 Failures/refuses visible

Red flag: "Agent said it worked."

4) Human gates

4.1 Named gate for money/sends/deletes · 4.2 No auto-outbound from prompt · 4.3 Secrets not pasted into chat as path · 4.4 Same plan rules for agents & humans

Red flag: Autodialer / HubSpot spray.

5) Stakeholder updates

5.1 Cite receipts/links · 5.2 Disclose without inventing · 5.3 Free vs paid gates clear · 5.4 Architecture matches runtime

Red flag: Pretty decks; no trail.

6) Catalog honesty (if you sell AI)

6.1 Prices match checkout · 6.2 Coming-soon ≠ live · 6.3 No SOC2 theater · 6.4 Not chatbot SaaS if buyers keep keys

Score: ____ / 24 No+Partial · 0–3 tight · 4–8 pick one \$3/\$1 · 9+ don't scale outreach yet

One gap this week: _____

Soft next steps (pick one):

1. DIY · 2. Consultation \$300 diagnose · 3. Pilot (slice + receipts) · 4. Free on revealui.com — Book 30-min intro guest-first Meet (no Google account to join).

Refuse: Not faster-than-Zap · not cheaper · not SOC2 · not rented chatbot · not Architecture-as-Consultation.

Known for: agentic business runtime on your own domain — tools report in, agents leave PROOF, catalog matches checkout.
