

Proof-gap checklist

Can you prove what your agents did last week?

An action record names who acted, what changed, and when.

Mark Yes / Partial / No. Count No + Partial; choose one gap to fix this week.

1) Accounts and ownership

1.1 Agents run on your domain / infra (or a named client's), not a black-box host you can't export

1.2 You can name who holds Stripe / DNS / GitHub / DB keys for the path that matters

1.3 You could leave a vendor and still keep the workflow (data + receipts), even if painful

1.4 "AI features" aren't locked to one chat UI you'll lose if the subscription ends

The work happened in agency tools, with no record on the client accounts.

2) Workflow connections

2.1 Booking, invoices, and agent work aren't three tabs with no shared truth

2.2 You know what owns the critical path (glue automation / automation builder / custom / hope)

2.3 Failures surface somewhere humans look, not only in a vendor dashboard

2.4 You're not one undocumented glue automation away from "nobody knows how leads get booked"

Glue automation owns the revenue path; agents are a side demo.

3) Action records

3.1 When an agent acts, something durable is written (log / receipt / audit row), not only chat

3.2 A non-engineer can open one link and see what ran

3.3 Action records identify who acted, what they changed, and when.

3.4 You can show a client "this action happened" without screen-sharing your IDE

3.5 Failed / refused actions are visible too (fail closed > silent skip)

The only evidence of the action is the agent response.

4) Human approvals

4.1 Money moves, sends, and deletes need a named human gate

4.2 Outbound (email / Slack) isn't auto-fired from a prompt without review

4.3 Secrets aren't pasted into chats as the normal path

4.4 Plan rules for agents match plan rules for humans (no "agent-only god mode")

Outgoing messages can be sent without the required human review.

5) Client updates

5.1 Weekly update can cite receipts or links, not only narrative

5.2 Agencies: you can disclose work without inventing activity

5.3 Stakeholders understand which features and limits apply to each plan.

5.4 System diagrams describe the software and connections that actually run.

Updates describe activity without links to action records.

6) Pricing and availability

6.1 Public prices match checkout

6.2 "Coming soon" isn't sold as live

6.3 Public certification claims have supporting documentation.

6.4 The product description explains who operates the software and holds the accounts.

Catalog and checkout tell different stories.

My score: ____ / 25 checks marked No or Partial.

One gap I will fix this week: _____

Next: Review one gap yourself or book a Consultation at \$300 per hour.

Consultation \$300 · Pilot \$3,997 (includes 1 Adapter) · Launch \$14,500 (up to 3 Adapters) · Adapter \$2,497 · Stage B \$297
